

One Platform. All Remote Care Programs.

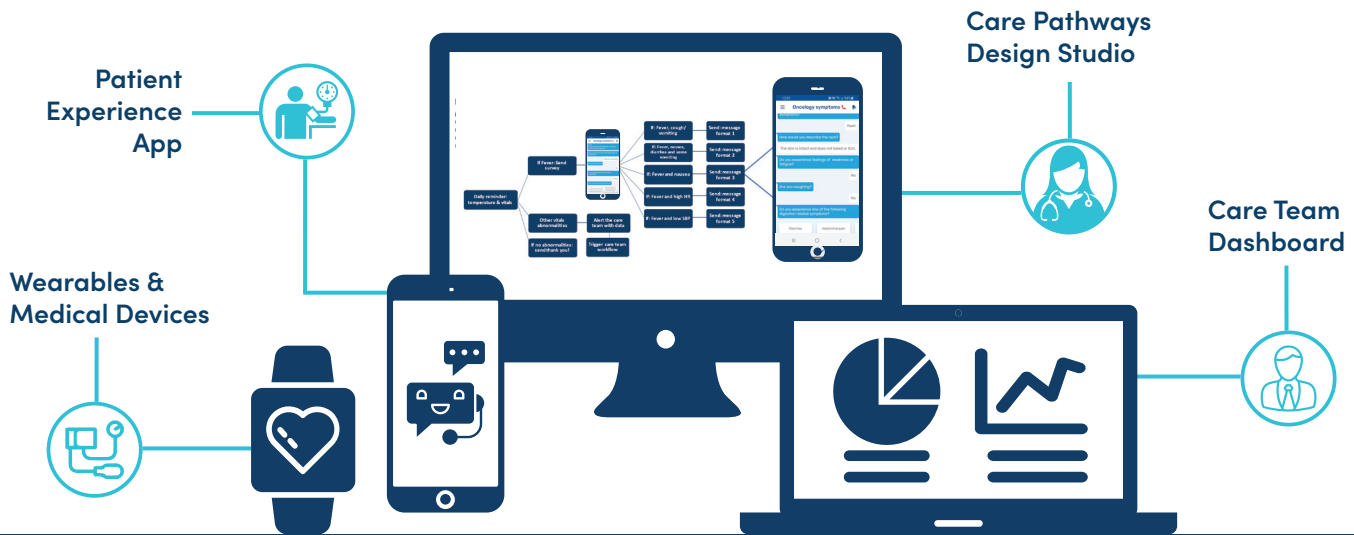

Use our pre-built automated remote care programs or collaborate with our Client Success team to create your own programs

- **Fully adaptable remote care platform** supporting any clinical condition, any device and any automated remote care workflow
- **Maximize Reimbursement** and increase caregiver capacity by utilizing our automated data engines
- **Synchronous and asynchronous** data collection and multichannel communication
- **Improve patient engagement** and adherence to care protocols

Datos Health supports the growing need to monitor and care for patients remotely with quick and easy deployment of personalized clinical workflows. Our solution facilitates connected care delivery across any clinical condition, patient profile, and treatment plans, significantly increasing patient engagement and reducing adverse events. Datos Health can be used as a standalone platform or integrated with any EMR.

Keep caring for your patients between visits

Implement continuity of care plans that improve outcomes and reduce adverse events

- Effortless design & deployment of personalized care pathways, drag & drop UI – no software developer needed
- Collect data synchronously and asynchronously
- Robust 2-way communication and data management engines
- Artificial Intelligence that cleanses, tags and validates data, saving care teams time and resources

Automate workflows to reduce care teams' workload and increase capacity

Collaborate with your dedicated Client Success manager to deploy customized care programs

Deliver the ultimate patient experience

The user-friendly mobile app delivers alerts and reminders as per remote care program rules, prompts patients to complete symptom surveys and collects data from wearables and medical devices. Include logic so patients know what steps they should take next. Push situation-specific content, and facilitate virtual visits or single-click calls to care teams.

Manage populations, cohorts and individuals

The care team dashboard grants providers customized views of entire populations, program-specific cohorts, and detailed data about individual patients. Rules can be set to automatically generate alerts or launch ad-hoc telehealth sessions.

Transform patient engagement by staying connected throughout their care journey...

Enhance patient engagement, personalize care

- Keep patients involved throughout their care journey and increase program adherence and engagement
- Reduce patients' anxiety by providing a "never on your own" safety net with daily monitoring and a customized care plan

Improve outcomes, reduce adverse events

- Proactive management of vitals and symptoms reduces hospital readmissions
- Early identification helps avert adverse events and improve quality outcomes

Increase capacity, automate for efficiency

- Streamline care-related tasks and follow-ups to increase care team capacity
- Built-in reporting tool helps you maximize reimbursement from a growing list of remote care CPT codes

At Datos Health, our goal is to drive clinical efficiency and improve patient care through automation. Our Care Programs encompass Chronic Disease Care, OBGYN, Pediatric Care, Psychiatric Care, Long Term Care and Hospital at Home. If you are interested in a specific use case, contact us as we are always working with providers, health systems and medical centers to develop new programs.

Use Cases include:

- Cardiac Rehab
- Covid-19 monitoring
- Type 1 and 2 Diabetes care
- Hypertension monitoring
- Psychiatric monitoring
- IBD symptom management
- LVAD monitoring
- Neurology and Parkinson's monitoring
- Gestational Diabetes and Preeclampsia monitoring
- Oncology Symptom Management
- Remote Pulmonary Rehab
